Would you like to run local LLMs, here is how you can do it with Ollama and the new DeepSeek-R1 model that is breaking the boundaries of AI. 🐳

For those of us passionate about pushing the boundaries of AI, this is a game changer. 🚀

Being able to run powerful language models locally, with the flexibility to fine-tune and experiment in a more personalized and secure environment, opens up so many possibilities.

Steps to run <u>DeepSeek AI</u> locally with <u>Ollama</u> on Docker:

```
# Install Ollama
docker run -d -v ollama:/root/.ollama -p 11434:11434 --name ollama ollama/ollama
# Pull the DeepSeek-R1 model
docker exec -it ollama ollama run deepseek-r1:7b
# Start chatting with DeepSeek-R1 - Web UI
docker run -d -p 3000:8080 --add-host=host.docker.internal:host-gateway -v open-webui:/app/backend/data --nam
```

Open <u>http://localhost:3000</u> in your browser, and you are done!

Let's make AI work for us, locally, efficiently, and creatively
