

# Como instalar a Evolution API 2.0

Link: <https://leonardoamoyr.com/como-instalar-a-evolution-api-2-0/>

Agosto/2024

## Apontamentos de domínio da Evolution API 2.0

Acesse o local onde você adquiriu o seu domínio, entre em Zone DNS (gerenciamento de DNS) e faça os seguintes apontamentos:

Tipo A

Nome: evolutionapi

Objeto/Valor: IP da sua VPS

Tipo A

Nome: www.evolutionapi

Objeto/Valor: IP da sua VPS

## Preparando o Portainer

Agora vamos para o Portainer!

Dentro do Portainer o primeiro passo é criar uma network chamada “evolutionapi”. Depois disso, acesse a aba de containers, clique no container do Traefik e role a página até o final. Selecione a network que você acabou de criar na lista e clique no botão “Join Network”.

Feito isso, agora clique em “Stacks” e clique no botão para criar uma nova stack. Copie o código abaixo e cole dentro do editor de stacks:

```
version: '3.7'
services:
  evolution2:
    image: atendai/evolution-api:v2.1.0
    networks:
      - evolutionapi
  environment:
```

```

```
networks:  
  evolutionapi:  
    external: true
```

Faça as configurações conforme eu oriento no vídeo da aula e depois clique no botão “Deploy Stack” e aguarde a finalização.

Uma vez finalizado, aguarde uns 30 segundos e acesse no seu navegador o site <https://evolutionapi.seusite.xxx/manager> (troque pelo seu domínio).

Agora basta logar com sua API Key e conectar sua instância.

Seja feliz =)
